OLA ELECTRIC SERVICE CRISIS ANALYTICS

COMPETITOR & MARKET ANALYSIS REPORT

BY NIDHI MEHTA

09 SEPT 2026

SERVICE CRISIS:
COMPLAINT TREND

- Industry: Electric 2-Wheeler / EV
- Business model: Direct-to-Consumer (D2C)

34.71%
OLA MARKET SHARE (2023-2024)

617660
OLA REGISTRATIONS (2023-2024)

₹143.84 CR
TOTAL WARRANTY CLAIM COST (2023–24)

Ola Electric is an electric two-wheeler company that scaled rapidly through a direct-to-consumer (D2C) operating
model. The rapid growth increased the number of vehicles requiring servicing while the service infrastructure did not expand at the same pace

The project evaluates 2023 - 2024 sales, complaints, job cards, warranty, service-centre, spare-parts, VAHAN registration and customer-review data to identify measurable service bottlenecks and their business impact.

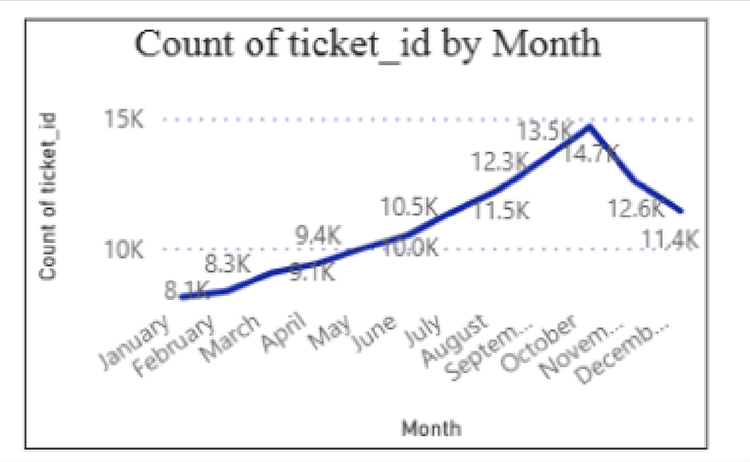

THE CRISIS IN FOUR DATES (2023-24)

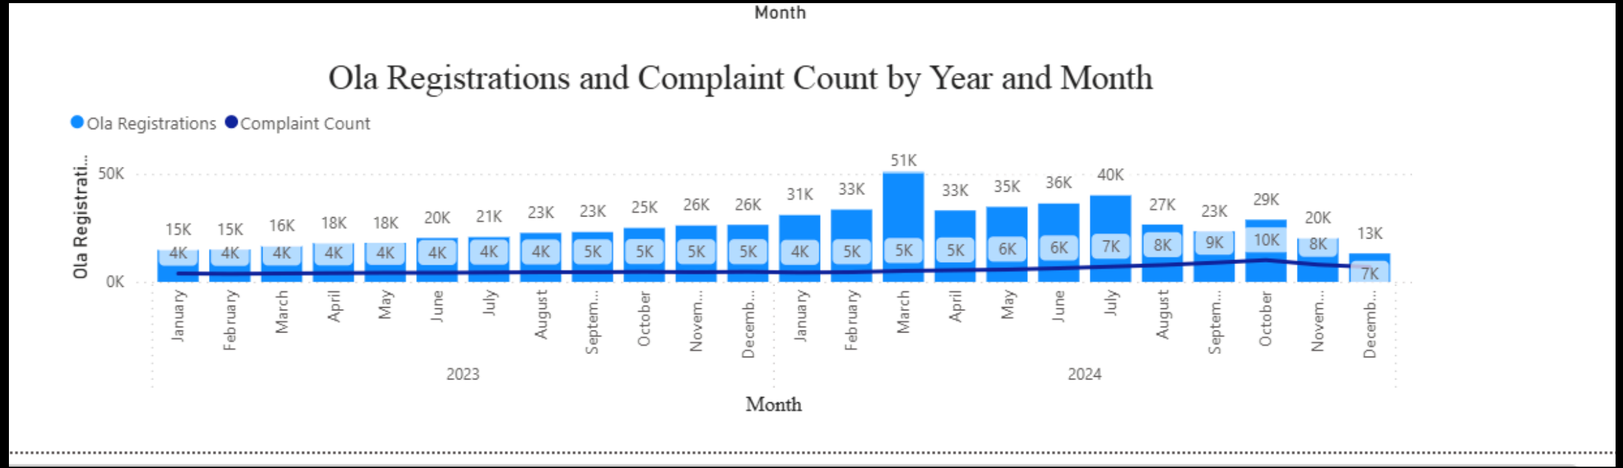

- 2023 - Steady baseline. Sales and complaints track normally.
- Early 2024 - Sales scale nearly 10x. Service network doesn't keep pace.
- Aug 2024 - Complaints, repair delays and stockouts start climbing sharply.
- Oct 2024 - CCPA issues a show-cause notice after sustained consumer helpline complaints.
- Dec 2024 - Market share falls; TVS and Bajaj move ahead.

KEY HIGHLIGHT

131366
Count of ticket_id

- Complaints increased steadily through 2024 and peaked in October.
- Ola registrations weakened sharply in the second half of 2024.

TWO-MONTH EARLY-WARNING EVIDENCE

The strongest negative relationship appears at a 2-month lag (-0.869), suggesting that complaints increase, registrations tend to decline about two months later.

Analysis	Correlation	Correlation
Lag 0	Same-month complaints vs registrations	-0.459
Lag 1	Jan–Nov complaints vs Feb–Dec registrations	-0.722
Lag 2	Jan–Oct complaints vs Mar–Dec registrations	-0.869

SERVICE-MODEL COMPARISON

DIRECT-TO-CONSUMER (OLA)	DEALER NETWORK(TVS AND BAJAJ
• Sells through its own app, website, experience centres • No independent dealer network to absorb repair surges • Every service centre is company-built, scaling takes time and capital	• Sells and services through established, independent dealerships • Existing dealer workshops can absorb demand spikes • Slower to launch new products, but more resilient during a crisis

FINANCIAL DAMAGE SUMMARY

THE COST OF POOR QUALITY

- ₹143.84 Cr - Total warranty claims paid (2023–24)
- ₹8.41 Cr - Compensation paid via National Consumer Helpline / CCPA cases
- ₹152.25 Cr - Combined total cost of poor quality

Warranty claims and customer compensation together created ₹152.25 Cr in direct costs, highlighting the financial impact of poor quality

TURNAROUND TIME TREND

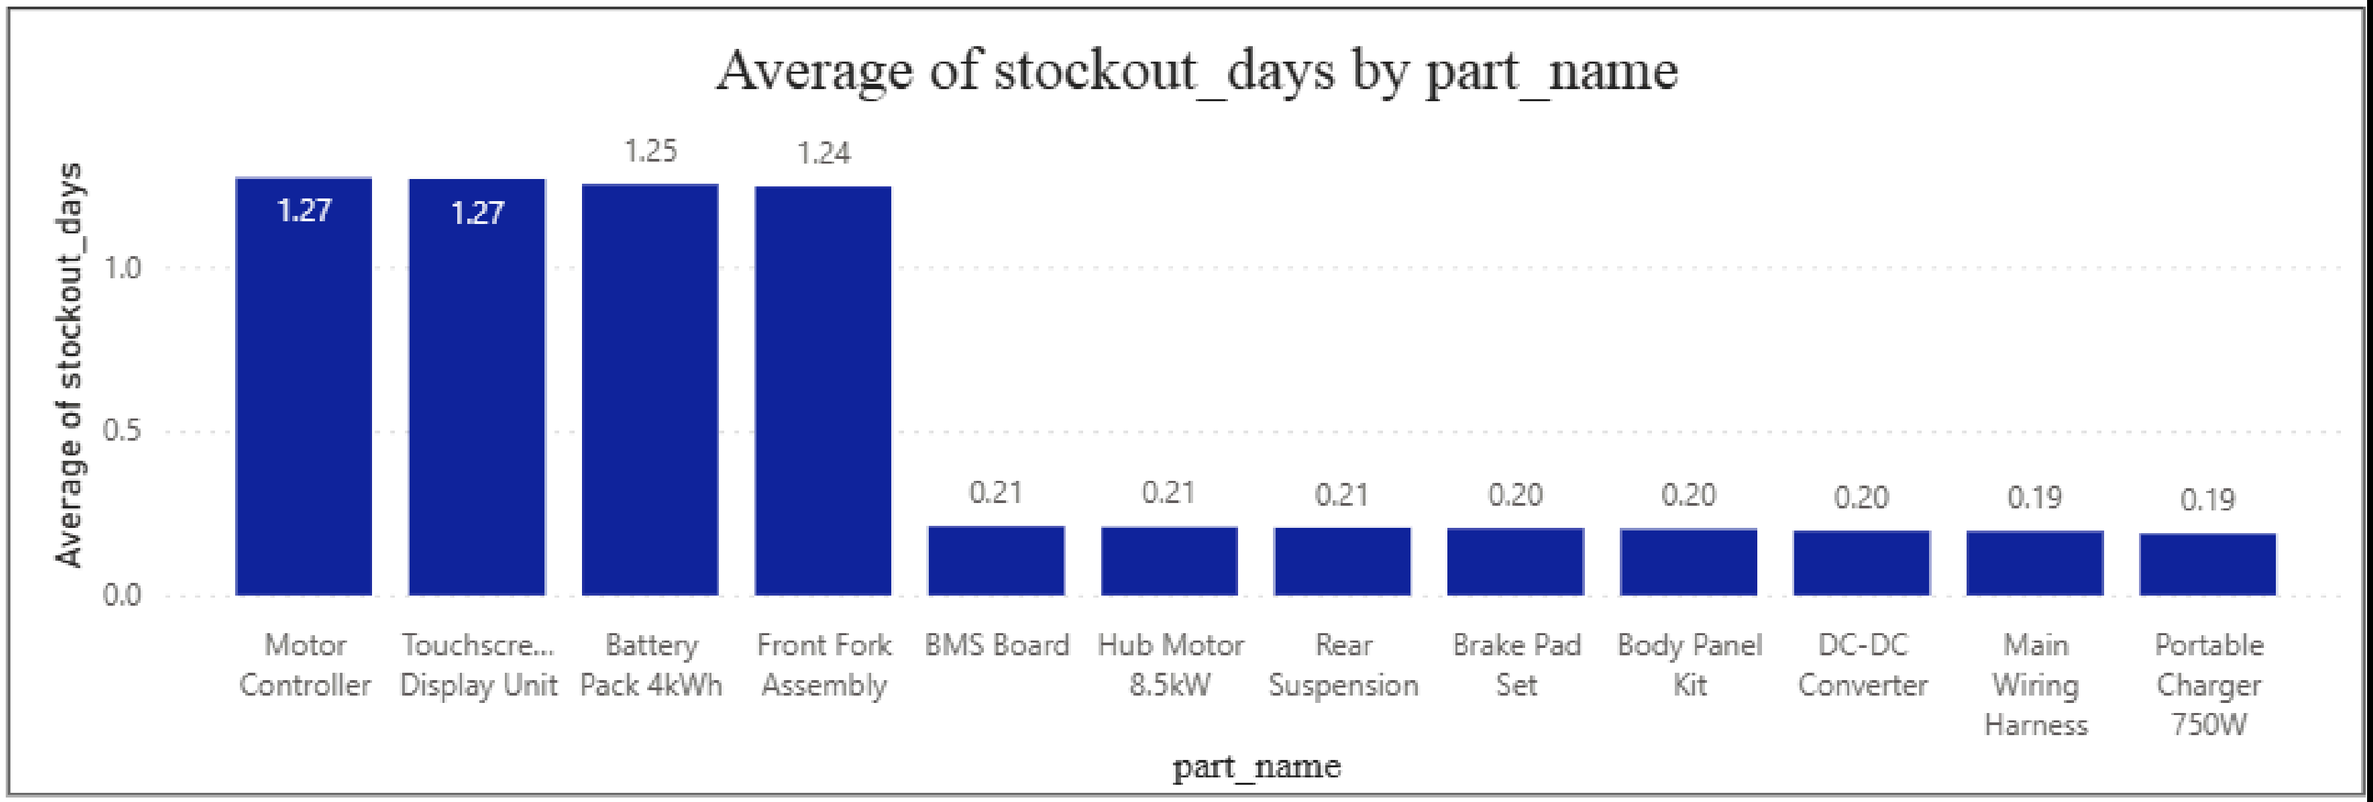

12.02

AVERAGE TURNOUND DAYS

TAT data shows significant service delays in 2024, with March reaching the highest average of 52 days. Negative TAT values were identified after recomputation, indicating inconsistencies between complaint and resolution dates.

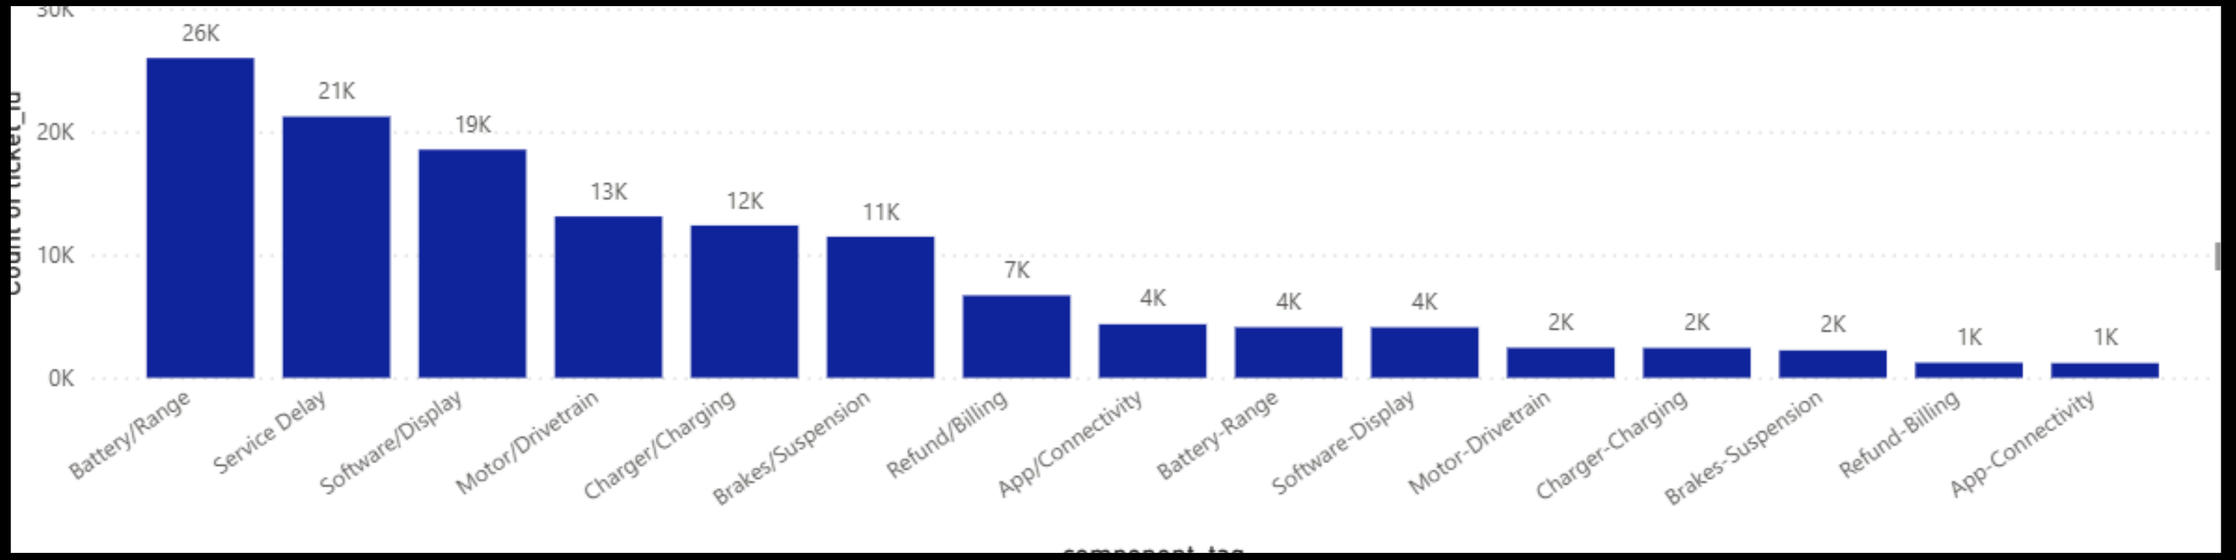

SPARE PARTS STOCKOUT

Battery Controller and Touchscreen Display Unit recorded the highest stockout days (1.27 days each), followed by the Battery Pack 4kWh and Front Fork Assembly.

MAJOR COMPLAINT AREAS

Battery-related issues recorded the highest complaint volume, followed by service delays and software/display issues.

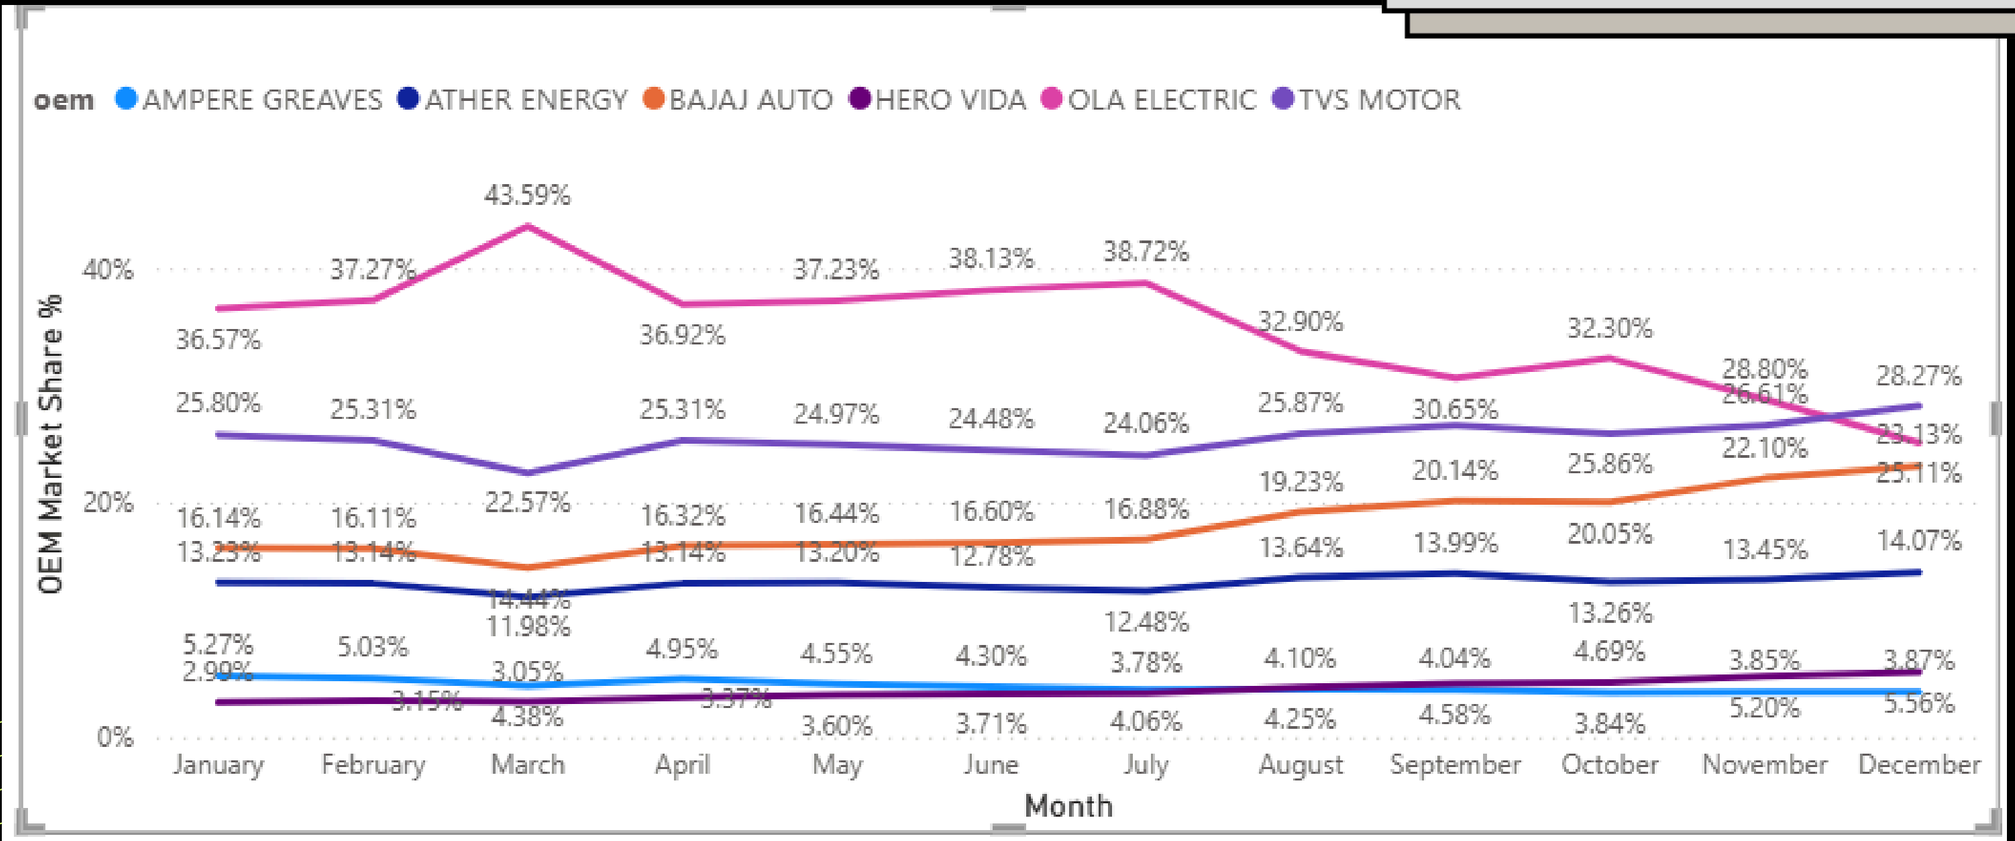

2023: Ola was the clear market leader throughout the year, with market share generally around 31 to 37%, while TVS remained below Ola.
2024: Ola continued to lead for most of the year and even reached 49.08% in March. However, from around October 2024, Ola's market share dropped sharply.

OLA ELECTRIC LOST MARKET EADERSHIP IN LATE 2024

COMPETITOR & MARKET ANALYSIS

Ola maintained strong market leadership through most of 2024, but experienced a sharp market-share decline from Q4 2024, coinciding with the period of severe service complaints and operational issues

Ola Electric maintained market leadership through most of 2024, but its market share declined sharply from Q4 2024, falling to 15.26% in December, while TVS and Bajaj moved ahead

RECOMMENDATIONS

Reduce Service TAT
- March 2024 had the highest average TAT of 52 days.
- Set monthly TAT targets and monitor delayed cases.

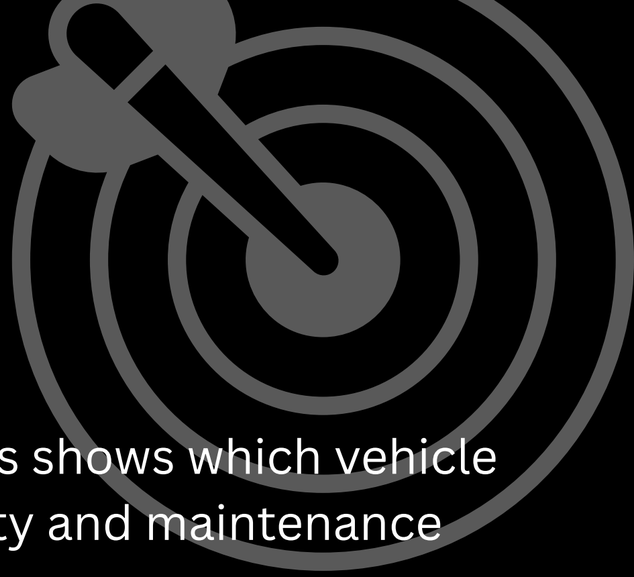

Improve Spare-Part Availability
- Battery Controller and Touchscreen Display Unit had the highest stockout days.
- Maintain higher safety stock for critical/high-demand parts.

Improve Spare-Part Availability
Battery Controller and Touchscreen Display Unit had the highest stockout days.

Battery complaints - Battery quality focus
Open complaints - Stronger case monitoring
Market-share decline - Integrated service + market monitoring

Strengthen Complaint Resolution:-
Monitor Open / Escalated complaints separately.
Create an escalation mechanism for long-pending complaints.

FOUR WAYS TO REBUILD

- Extended Warranty & AMC Plans - ₹143.84 Cr already spent on warranty claims shows which vehicle parts fail most often. Use this information to create and price optional warranty and maintenance plans.

- Tier-2/3 Franchise Service Network - A quick way to increase the number of service centres in smaller cities and towns

- B2B Fleet & Gig-Delivery Contracts - Delivery riders and fleet companies mainly want reliable vehicles with low running costs, not a famous brand. This reduces the challenge of convincing individual customers.

- Certified Refurbished Resale - Vehicles that come to service centres for warranty repairs can be fixed, checked, and resold as certified used vehicles, helping recover some of the money already spent.
